

Apex Seed Coating...Proven Performance.

Apex Seed Coating is a carefully formulated mix of minerals, special compounds, and rhizobia bacteria, specifically designed for any type of legume seed, that is bonded to each seed in a dense, durable coating. The Apex coating provides for a protected germination zone and microenvironment to ensure seed to plant survivability and to stimulate vigorous growth in young seedlings.

University and field trials have shown that Apex Seed Coating ensures:

- *Nodulation*
- *Improved seedling emergence*
- *More uniform stands*
- *Potentially higher yields*
- *More plants per pound of seed*
- *Increased seed survivability – 50% or more*
- *Superior performance over uncoated seeds*
- *Easier handling and even distribution*

With Apex coated seeds you get more plants per bag, even though you are actually planting less seed. And while uncoated seed performs well under perfect field conditions, only Apex Seed Coating provides superior performance under ALL conditions. Also Available as Registered Organic.
